

The Composition of Dense Neural Networks and Formal Grammars for Secondary Structure Analysis

Polina Lunina, **Semyon Grigorev**

JetBrains Research, Programming Languages and Tools Lab
Saint Petersburg University

February !!!, 2019

Problem Statement

- Sequences classification
 - ▶ Lexer and parser
 - ▶ Translator
 - ▶ Types mapping
 - ▶ Headers files processing
 - ▶ ...
- Unify kernels on client side
 - ▶ Currently native Brahma.FSharp's kernel and kernel loaded by type provider are different types
- Improve mechanism of kernels composition

Secondary structure!!!

- Key is secondary structure: Infernal, other works
- Problem: high variability.
- Solutions: PCFG, CM

Our receipt: Parsing + DNN

- Idea: not secondary structure modelling, but features extraction!

Our receipt: Parsing + DNN

- Idea description. Figure

Grammar

```
s1: stem<s0>
any_str : any_smb*[2..10]
s0: any_str | any_str stem<s0> s0
any_smb: A | T | C | G
stem1<s>:                \\ stem of height exactly 1
    A s T | G s C | T s A | C s G
stem2<s>:                \\ stem of height exactly 2
    stem1< stem1<s> >
stem<s>:                 \\ stem of height 3 or more
    A stem<s> T
    | T stem<s> A
    | C stem<s> G
    | G stem<s> C
    | stem1< stem2<s> >
```

Example 1: Stem

$\omega_1 = \text{CCCCATTGCCAAGGACCCACCTTGGCAATCCC}$

Example 2: Pseudoknot

$\omega_2 = \text{CCACTTACCTATGACCTAAGTCCTCATACC}$

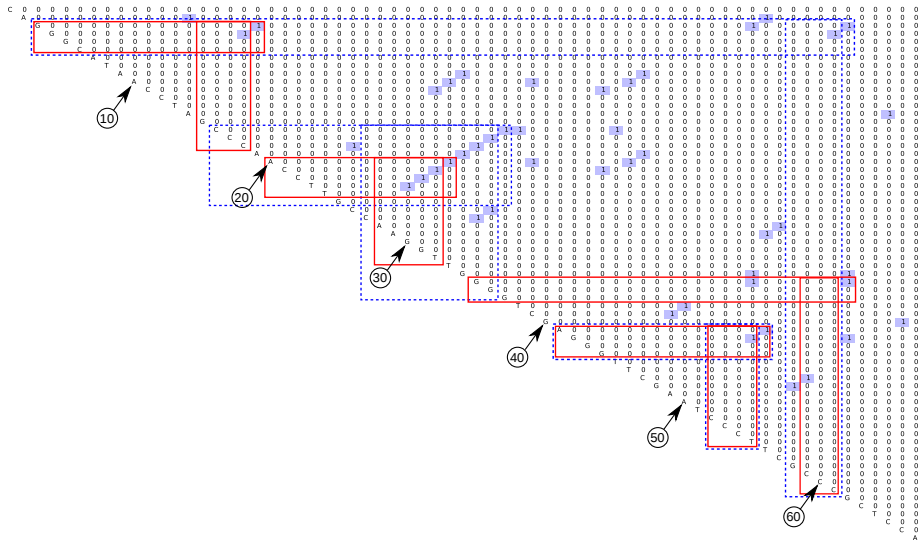

Example 2: Pseudoknot

$\omega_3 =$

CAGGGCATAACCTAGCCCAACCTTGCCAAGG
TTGGGGTCGAGGGTTCGAATCCCTTCGCCCCGCTCCA

Example 2: Pseudoknot

- Compile-time metaprogramming for types creation
 - ▶ Type provider is a **function which constructs type**

- Compile-time metaprogramming for types creation
 - ▶ Type provider is a **function which constructs type**

- Compile-time metaprogramming for types creation
 - ▶ Type provider is a **function which constructs type**

- F# OpenCL C type provider
 - ▶ Type-safe integration of existing OpenCL C code in F# applications
 - ▶ Proof of concept
