- Automatization of checking of the proofs correctness

Automated Theorem Proving

- Automatization of checking of the proofs correctness
- Also a way to create correct-by-construction algorithms
 - ▶ Coq proof assistant
 - ★ Based on calculus of inductive constructions
 - ★ Supports extraction of certified programs to executable programming languages

Goals:

- Check nontrivial proofs
- Ensure correctness of algorithms
 - ▶ Parsing algorithms
 - ▶ Algorithms over regular expressions
 - ▶ Algorithms over finite automata

The Bar-Hillel Theorem

Theorem (Bar-Hillel)

If L_1 is a context-free language and L_2 is a regular language, then $L_1 \cap L_2$ is context-free language.

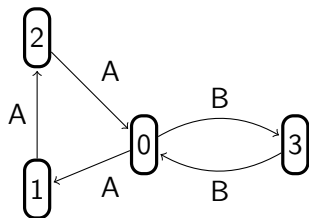

Context-Free Path Quierying (CFPQ)

Context-Free Path Quierying (CFPQ)

Navigation through an edge-labelled graph

Context-Free Path Quierying (CFPQ)

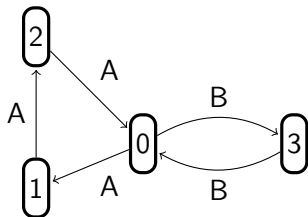

Navigation through an edge-labelled graph

Context-Free Path Quierying (CFPQ)

Navigation through an edge-labelled graph

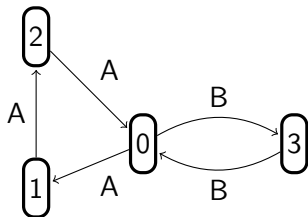

- Are there paths in graph, which form well-balanced sequences over A and B?

Context-Free Path Quierying (CFPQ)

Navigation through an edge-labelled graph

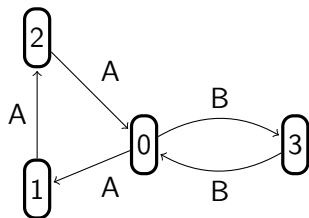

- Are there paths in graph, which form well-balanced sequences over A and B?
- Find all paths π , such that π form a word in the Dyck language over A and B

Context-Free Path Quierying (CFPQ)

Navigation through an edge-labelled graph

- Are there paths in graph, which form well-balanced sequences over A and B?
- Find all paths π , such that π form a word in the Dyck language over A and B

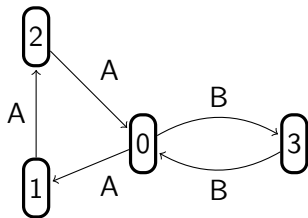

Paths filter (query):

$$s \rightarrow A s B s \mid \varepsilon$$

Context-Free Path Quierying (CFPQ)

Navigation through an edge-labelled graph

- Are there paths in graph, which form well-balanced sequences over A and B?
- Find all paths π , such that π form a word in the Dyck language over A and B

Paths filter (query):

$$s \rightarrow A s B s \mid \varepsilon$$

Answer:

- $2 \xrightarrow{A} 0 \xrightarrow{B} 3$
- $1 \xrightarrow{A} 2 \xrightarrow{A} 0 \xrightarrow{B} 3 \xrightarrow{B} 0$
- ...

- $\mathbb{G} = (\Sigma, N, P, S)$ — context-free grammar
 - ▶ $L(\mathbb{G}) = \{w \mid S \Rightarrow^* w\}$

- $\mathbb{G} = (\Sigma, N, P, S)$ — context-free grammar
 - ▶ $L(\mathbb{G}) = \{w \mid S \Rightarrow^* w\}$
- $G = (V, E, T)$ — directed graph
 - ▶ $v \xrightarrow{t} u \in E$
 - ▶ $T \subseteq \Sigma$

- $\mathbb{G} = (\Sigma, N, P, S)$ — context-free grammar
 - ▶ $L(\mathbb{G}) = \{w \mid S \Rightarrow^* w\}$
- $G = (V, E, T)$ — directed graph
 - ▶ $v \xrightarrow{t} u \in E$
 - ▶ $T \subseteq \Sigma$
- $\omega(\pi) = \omega(v_0 \xrightarrow{t_0} v_1 \xrightarrow{t_1} \dots \xrightarrow{t_{n-2}} v_{n-1} \xrightarrow{t_{n-1}} v_n) = t_0 t_1 \dots t_{n-1}$

CFPQ: Formal View

- $\mathbb{G} = (\Sigma, N, P, S)$ — context-free grammar
 - ▶ $L(\mathbb{G}) = \{w \mid S \Rightarrow^* w\}$
- $G = (V, E, T)$ — directed graph
 - ▶ $v \xrightarrow{t} u \in E$

Sketch of the Proof¹

Theorem (Bar-Hillel)

If L_1 is a context-free language and L_2 is a regular language, then $L_1 \cap L_2$ is context-free.

- 1 Assume that there is a context-free grammar \mathbb{G}_{CNF} in Chomsky Normal Form, such that $L(\mathbb{G}_{CNF}) = L_1$

¹Richard Beigel and William Gasarch

Sketch of the Proof¹

Theorem (Bar-Hillel)

If L_1 is a context-free language and L_2 is a regular language, then $L_1 \cap L_2$ is context-free.

- 1 Assume that there is a context-free grammar \mathbb{G}_{CNF} in Chomsky Normal Form, such that $L(\mathbb{G}_{CNF}) = L_1$
- 2 Assume that there is a set of regular languages $\{A_1 \dots A_n\}$ where each A_i is recognized by a DFA with precisely one final state and $L_2 = A_1 \cup \dots \cup A_n$

¹Richard Beigel and William Gasarch

Sketch of the Proof¹

Theorem (Bar-Hillel)

If L_1 is a context-free language and L_2 is a regular language, then $L_1 \cap L_2$ is context-free.

- ① Assume that there is a context-free grammar \mathbb{G}_{CNF} in Chomsky Normal Form, such that $L(\mathbb{G}_{CNF}) = L_1$
- ② Assume that there is a set of regular languages $\{A_1 \dots A_n\}$ where each A_i is recognized by a DFA with precisely one final state and $L_2 = A_1 \cup \dots \cup A_n$
 - ▶ If $L \neq \emptyset$ and L is regular then L is the union of regular languages A_1, \dots, A_n where each A_i is accepted by a DFA with a single final state

¹Richard Beigel and William Gasarch

Sketch of the Proof¹

Theorem (Bar-Hillel)

If L_1 is a context-free language and L_2 is a regular language, then $L_1 \cap L_2$ is context-free.

- 1 Assume that there is a context-free grammar \mathbb{G}_{CNF} in Chomsky Normal Form, such that $L(\mathbb{G}_{CNF}) = L_1$
- 2 Assume that there is a set of regular languages $\{A_1 \dots A_n\}$ where each A_i is recognized by a DFA with precisely one final state and $L_2 = A_1 \cup \dots \cup A_n$
 - ▶ If $L \neq \emptyset$ and L is regular then L is the union of regular languages A_1, \dots, A_n where each A_i is accepted by a DFA with a single final state
- 3 For each A_i we can explicitly define a grammar of the intersection:
 $L(\mathbb{G}_{CNF}) \cap A_i$

¹Richard Beigel and William Gasarch

Sketch of the Proof¹

Theorem (Bar-Hillel)

If L_1 is a context-free language and L_2 is a regular language, then $L_1 \cap L_2$ is context-free.

- ❶ Assume that there is a context-free grammar \mathbb{G}_{CNF} in Chomsky Normal Form, such that $L(\mathbb{G}_{CNF}) = L_1$
- ❷ Assume that there is a set of regular languages $\{A_1 \dots A_n\}$ where each A_i is recognized by a DFA with precisely one final state and $L_2 = A_1 \cup \dots \cup A_n$
 - ▶ If $L \neq \emptyset$ and L is regular then L is the union of regular languages A_1, \dots, A_n where each A_i is accepted by a DFA with a single final state
- ❸ For each A_i we can explicitly define a grammar of the intersection:
 $L(\mathbb{G}_{CNF}) \cap A_i$
- ❹ Finally, join them together with the operation of the union

```

Jana Hofmann

```
Inductive ter : Type :=  
| T : Tt -> ter.
```

We needed an arbitrary type for terminals and nonterminals!

We had to carefully refactor everything...

DFA Splitting

If $L \neq \emptyset$ and L is regular, then L is the union of regular languages A_1, \dots, A_n where each A_i is accepted by a DFA with precisely one final state

DFA Splitting

If $L \neq \emptyset$ and L is regular, then L is the union of regular languages A_1, \dots, A_n where each A_i is accepted by a DFA with precisely one final state

Lemma `correct_split`:

```
forall dfa w,  
  dfa_language dfa w <->  
  exists sdfa,  
    In sdfa (split_dfa dfa) /\ s_dfa_language sdfa w.
```

Chomsky Induction

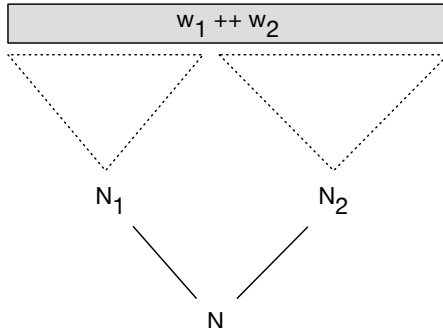

Lemma

Let \mathbb{G} be a grammar in CNF. Consider an arbitrary nonterminal $N \in \mathbb{G}$ and phrase which consists only of terminals w . If w is derivable from N ($\text{der}(\mathbb{G}, N, w)$) and $|w| \geq 2$, then there exists two nonterminals N_1, N_2 and two phrases w_1, w_2 such that: $N \rightarrow N_1 N_2 \in \mathbb{G}$, $\text{der}(\mathbb{G}, N_1, w_1)$, $\text{der}(\mathbb{G}, N_2, w_2)$, $|w_1| \geq 1$, $|w_2| \geq 1$ and $w_1 ++ w_2 = w$.

Chomsky Induction

Lemma

Let \mathbb{G} be a grammar in CNF. Consider an arbitrary nonterminal $N \in \mathbb{G}$ and phrase which consists only of terminals w . If w is derivable from N ($\text{der}(\mathbb{G}, N, w)$) and $|w| \geq 2$, then there exists two nonterminals N_1, N_2 and two phrases w_1, w_2 such that: $N \rightarrow N_1 N_2 \in \mathbb{G}$, $\text{der}(\mathbb{G}, N_1, w_1)$, $\text{der}(\mathbb{G}, N_2, w_2)$, $|w_1| \geq 1$, $|w_2| \geq 1$ and $w_1 ++ w_2 = w$.

Chomsky Induction in Coq

```
Definition syntactic_analysis_is_possible :=  
forall (G : grammar) (A : var) (w : phrase),  
  der G A w -> (R A w \in G)  
    \/  
    (exists rhs, R A rhs \in G /\ derf G rhs w).
```

```
Variable grammars: seq (var * grammar).
```

```
Theorem correct_union:
```

```
forall word,
```

```
  language (grammar_union grammars) (V (start Vt))  
    (to_phrase word)
```

```
<->
```

```
exists s_l,
```

```
  language (snd s_l) (fst s_l) (to_phrase word)
```

```
 /\
```

```
  In s_l grammars.
```

The Final Theorem

Theorem

For any two decidable types $\mathbf{T}t$ and $\mathbf{N}t$ for types of terminals and nonterminals correspondingly. If there exists a bijection from $\mathbf{N}t$ to \mathbb{N} and syntactic analysis is possible (in the sense of our definition), then for any DFA \mathbf{dfa} and any context-free grammar \mathbb{G} , there exists the context-free grammar \mathbb{G}_{INT} , such that $L(\mathbb{G}_{INT}) = L(\mathbb{G}) \cap L(\mathbf{dfa})$.

The Final Theorem in Coq

```
Theorem grammar_of_intersection_exists:
  exists
    (NewNonterminal: Type)
    (IntersectionGrammar: @grammar Terminal NewNonterminal)
    St,
  forall word,
    dfa_language dfa word /\ language G S (to_phrase word)
    <->
    language IntersectionGrammar St (to_phrase word).
```

Conclusion

- We present mechanized in Coq proof of the Bar-Hillel theorem on the closure of context-free languages under intersection with the regular languages

Conclusion

- We present mechanized in Coq proof of the Bar-Hillel theorem on the closure of context-free languages under intersection with the regular languages
- We generalize the results of Jana Hofmann and Gert Smolka
 - ▶ The definition of the terminal and nonterminal alphabets in context-free grammar were made generic
 - ▶ All related definitions and theorems were adjusted to work with the updated definition

Conclusion

- We present mechanized in Coq proof of the Bar-Hillel theorem on the closure of context-free languages under intersection with the regular languages
- We generalize the results of Jana Hofmann and Gert Smolka
 - ▶ The definition of the terminal and nonterminal alphabets in context-free grammar were made generic
 - ▶ All related definitions and theorems were adjusted to work with the updated definition
- All results are published at GitHub and are equipped with automatically generated documentation

- Marcus Ramos vs Jana Hifmann
 - ▶ We use results of Jana Hofman
 - ▶ Results of Marcus Ramos seem more mature
 - ▶ Is it possible to create one “true” solution in this area?
 - ★ Is our grammar-based proof better then PDA-based one in all contexts?

- Marcus Ramos vs Jana Hifmann
 - ▶ We use results of Jana Hofman
 - ▶ Results of Marcus Ramos seem more mature
 - ▶ Is it possible to create one “true” solution in this area?
 - ★ Is our grammar-based proof better then PDA-based one in all contexts?
- Mechanization of practical algorithms which are just implementation of the Bar-Hillel theorem
 - ▶ Context-free path querying algorithm, based on CYK or even on GLL parsing algorithm
 - ▶ Certified algorithm for context-free constrained path querying for graph databases
